

FIBROMAS

Fibromas are black or skin colored skin tags.

Removal is painless and fast.

After treatment:

WRINKLES

With the new thermocoagulation treatment, the removal of wrinkles is easier, faster and less painful.

Before

After

ANGIOMAS

Angiomas are red skin tags. When treating angiomas with thermocoagulation, removal is painless and gives an immediate result.

TREATMENT WITH RADIOFREQUENCY

The principle of radiofrequency is the heating of the vein which causes the vein to coagulate.

The rise in temperature is achieved by sending a high frequency pulse in the tip of the needle.

ADVANTAGES PATIENT:

- No pain
- Immediate result
- Fast removal
- No scars
- No bleeding

ROSACEA

Rosacea is a condition where redness appears due to the presence of small, dilated red blood vessels visible on the face.

HOW DO YOU GET ROSACEA?

Rosacea is often caused by skin that is structurally thin and sensitive. Exposure to extreme cold, harsh winds or extreme heat can also contribute to this condition.

SPIDER VEINS

Spider veins are small dilated blood vessels near the surface of the skin.

Spider Veins are caused by insufficient pumping of the blood from the leg to the heart.
