

# Viridex RF skin therapy

- **All-in-one** device
- Wide range of treatments
- Low investment and maintenance costs
- Immediate return to normal daily activities

## Technical specifications

### Size and weight:

- Height: 12 cm
- Depth: 28 cm
- Width: 36 cm
- Weight: 12 kg
- Packaging carrying case

### Power supply:

- Supply voltage: 115-230V / 50-60 Hz
- Power: 125 VA
- BF type of device
- Protection against liquid penetration: IPX0
- Temporized fuse in glass
- Insulation: Class I
- Output of thermo coagulation (HF) signal
- Fuse reference: 2 X F2A / 250V

## A clear vision on skin therapy

The principle of thermocoagulation is the heating of the vein or skin through 4 Mhz vibrations at the tip of the needle. The Viridex RF uses different types of needles. For every treatment option a different dedicated and specially shaped needle is applied. The settings are preprogrammed but can be changed according to each individual treatment.

### Telangiectasias and Veins associated with Rosacea

**Telangiectasias** (also known as spider veins) are small dilated blood vessels near the surface of the skin, measuring between 0.5 and 1 millimeter in diameter. They can develop anywhere on the body but are commonly seen on the face around the nose, cheeks, and chin. They can also develop on the legs, specifically on the upper thigh, below the knee joint, and around the ankles.

**Rosacea** is a chronic condition characterized by facial erythema (redness) and sometimes pimples. Rosacea affects all ages and genders.

### Cherry Angiomas

**Angiomas** are benign tumors derived from cells of the vascular or lymphatic vessel walls or derived from cells of the tissues surrounding these vessels.

### Fibromas

**Fibromas** are benign tumors that are composed of fibrous or connective tissue. The soft fibroma (fibroma molle) or fibroma with a shaft consist of many loosely connected cells and less fibroid tissue. It mostly appears at the neck, armpits or groin.

### Age Spots

**Age spots** or liver spots are blemishes on the skin associated with aging and exposure to ultraviolet radiation from the sun. They range in color from light brown to red or black and are located in areas most often exposed to the sun, particularly the hands, face, shoulders, arms and forehead, and the scalp if bald.

### Wrinkles

Collagen and elastin are key parts of your skin's structure. It forms a network of fibres within your skin that acts like a framework combined with elastin for the elasticity.

**Wrinkles** are due to a loss of collagen and elastin in the skin. The collagen is lost mostly from sun damage but aging also causes some collagen and elastin loss. As skin wrinkles, it becomes thin and fragile too. To really reverse wrinkles on your skin, you need to re-thicken the skin and build more collagen.

### Stretch marks

**Stretch marks** or striae, as they are called in dermatology, are a form of scarring on the skin with an off-color hue. They are caused by tearing of the dermis, which over time may diminish, but will not disappear completely. Stretch marks are often the result of the rapid stretching of the skin associated with rapid growth or rapid weight changes. Stretch marks may also be influenced by hormonal changes associated with puberty, pregnancy, hormone replacement therapy, etc.
